

## A Two Year Project Completed in Four Weeks

Sprint Business International provides business-to-business communications products and services abroad.

For over two years Sprint had attempted to create a viable solution that would allow customers and sales representatives to evaluate the availability of Sprint and Sprint partners' products between international locations. The project was complicated by the fact that product lines were managed by various autonomous business entities, and product information was not standardized.

Wild-Webs met and coordinated with each business entity to create a plan for the project and a roadmap for development of the proposed solution - a Product Availability Matrix. Wild-Webs created a prototype database-driven application that was used as the foundation for the final solution which was integrated into sprint.com and Sprint's intranet.

Wild-Webs was able to complete the project in less than four weeks.

Wild-Webs develops custom, interactive and database driven online solutions for business. We create solutions to meet a variety of needs, such as: promoting your business to the general public; intranet applications for use within your company; and private sites (extranet) for sharing content with clients and partners.
